Opinion Network Formation

Assignment 1 – Team Name

Member 1 Member 2 Member 3

September 18, 2026

1 Team Name

Guidance: State the team name and list members with roll numbers.

2 GitHub Link to Code

Guidance: Link to the repository, plus a one-line pointer to how it's organized (e.g., `src/` for pipeline code, `figures/` for outputs). Make sure the repo is accessible to graders.

3 Dataset Documentation

3.1 Data Description

Guidance: What was collected, how many respondents/statements, what categories or themes the statements fall into.

3.2 Encoding and Preprocessing

Guidance: How raw survey responses were converted to a numeric/analyzable form (e.g., Likert-to-numeric mapping), and any other transformation applied before network construction.

3.3 Handling Missing Data and Data Quality

Guidance: How missing/skipped responses were treated, any filtering applied (e.g., dropping low-engagement respondents), and why.

4 Pipeline Followed

Guidance: Describe the network(s) you built and the step-by-step process for constructing each from the prepared data: what are the nodes, what defines an edge, how weights are computed, and how/why the graph was sparsified (if at all). One subsection per network.

4.1 User–User Network

4.2 Statement–Statement Network

4.3 User–Statement Network

5 Analysis and Visualizations

Guidance: For each network: a figure, the key structural metrics (e.g., nodes, edges, density, degree/centrality measures, communities), and a short interpretation of what the numbers/figure show.

5.1 User–User Network

5.2 Statement–Statement Network

5.3 User–Statement Network

6 Results and Discussion

Guidance: Step back from individual networks and interpret what they reveal about the class's opinions overall. Suggested angles:

- *Overall opinion structure – broad consensus vs. contested topics.*
- *Cross-network agreement – do findings from one network corroborate or contradict another?*
- *Notable/central respondents, statements, or communities, and what they mean substantively.*
- *Limitations of the approach and choices made (thresholds, filtering, weighting scheme).*

7 Individual Contribution

Guidance: Table or list mapping each member to the specific tasks they completed (this section is graded individually, so be specific and complete).

Member	**Contribution**
Name 1	
Name 2	
Name 3
